SUMMARY

Computer Science undergraduate with hands-on experience building full-stack web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js) and basic exposure to Machine Learning and data science tools (Python, Pandas, NumPy, Scikit-learn). Skilled in developing role-based, JWT-secured applications with real-time features, RESTful APIs, and cloud deployment (Vercel, Render). Currently building an end-to-end ML platform using FastAPI and scikit-learn with a microservice architecture. Strong foundation in data structures and algorithms, SQL, and Git-based version control, with a growing interest in AI/ML-driven web applications.

EDUCATION

B.Tech in Computer Science & Engineering

Parul University, Vadodara

Jul 2023 – Present

- CGPA: 7.55 / 10

PROJECTS

HostelCare — Hostel Complaint Management System | [GitHub](#) | [Live Demo](#)

Sep 2025

Tech Stack: Node.js, Express.js, MongoDB, React.js, Tailwind CSS, JWT Authentication

- Built a role-based complaint management system for students, wardens, and admins to solve slow and manual hostel complaint handling.
- Architected and deployed a full-stack web application supporting **3 user roles** (students, wardens, admins) across **8+ complaint categories**, designed to handle **50+ concurrent users**.
- Secured the application with **JWT-based authentication** and role-based access control to restrict data visibility by user type.
- Allowed students to raise complaints with image uploads for clearer issue verification and tracking.
- Added real-time complaint status tracking so students and wardens can easily see what stage each complaint is at, making the whole process more transparent

ChurnSense — Customer Churn Prediction Platform | [GitHub](#)

In Progress, 2026

Tech Stack: React.js, Node.js, Express.js, Python, FastAPI, Scikit-learn, MongoDB

- Building a full-stack ML platform to predict customer churn, returning churn probability, confidence score, and risk level (Low/Medium/High).
- Designing a microservice architecture where a React dashboard talks to an Express API, which calls an independent FastAPI service for model inference, keeping the ML logic decoupled from the Node.js backend.
- Training and comparing multiple classification models (Logistic Regression, Random Forest, Gradient Boosting) with scikit-learn, selecting the best model using precision/recall/ROC-AUC rather than accuracy alone.
- Will update with final model performance metrics and a live demo link once training and deployment are complete.

SKILLS

Languages: Java, JavaScript (ES6+), Python, SQL, HTML/CSS

Web Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS

Data Science & ML (Basic): Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

Databases: MySQL, MongoDB

Tools & Platforms: Git, GitHub, Vercel, Render
